I'm in my 3rd year of a Mathematics and Computer Science degree at UVic. I'm a software developer, and have spent 20 months total on software teams for Victoria-based and SF-based companies. My software experience is in interfaces and microservices. I've been the owner of product features that were a great success, and I've been accountable for features that went south. I bring foresight and a tentative approach to new tasks, and communicate early and often with team members whose work integrates with mine. I'm interested in joining a software team part-time (~30 hours/week) for the remainder of my degree. I'm not looking for work in any specific language or framework; my interest is in work that will push my limits, so that I may grow my skillset and intuition.

Skills

- Writing web apps that feel like native apps - Fast, never-refreshing, AJAX-heavy
- Ubuntu server management, command line, automation, deployment
- Experience developing and deploying microservices
- Mathematics background allows me to apply graph theory techniques and analyze performance
- Technologies: React, Redux, ReactiveX, Nginx, Python, Ruby, C++, Java, Lua, and more

Previous Experience

2017–2018	Reelgood Web Developer, full-time San Francisco, CA (remote)
2016–2017	Leanpub Junior Developer co-op, 2 terms Victoria, BC

Education

2018	BSc (in progress), Mathematics and Computer Science combined major University of Victoria, Victoria
2015	BSc (in progress), Mathematics major Thompson Rivers University, Kamloops
